

Conceptualization of Learning

Learning, in my view, is an active and dynamic process where students construct their own understanding of the world. I believe learning occurs when students are encouraged to explore, question, and connect new knowledge to their existing experiences. A successful learning situation is one where students feel safe to take risks, make mistakes, and engage deeply with the material.

To illustrate, I see learning not as filling an empty vessel but as cultivating a garden. Just as a gardener provides the right conditions for plants to grow—nutrients, water, and sunlight—I create an environment where students can thrive by providing the tools, guidance, and support they need to develop their unique strengths and passions.
